

HTA Core Model Online

Technical Note 1/2016 (27 Jan 2016)

The HTA Core Model version 3.0 was published within the HTA Core Model Online as an HTML version on the 4th of December, 2015. Some changes were, however, made to this first release after its initial publication. The final version 3.0 is available as of the 26th of January, 2016 as HTML, PDF and DOCX.

Any users of the Model who have considered using the version 3.0 (by e.g. including its content in project plans) before the final version was published, should be aware of the following main differences between the first release and the final version:

1. **Assessment element A0017** has been removed from the CUR domain. Element **A0025** in the same domain has been updated to include respective aspects.
2. **Assessment element D0023** has been removed from the EFF domain and included in the ECO and ORG domains as a shared element.
3. The question in **assessment element H0100** of the SOC domain has been revised.
4. In **EFF domain** the chapter 'Methodology – Tools for critical appraisals' contains a new subchapter on 'Systematic reviews and meta-analyses'.
5. In **SOC domain** the following chapters contain minor updates: 'Methodology – Why is this domain important?' and 'Methodology – Reporting and interpretation'.

The final version is currently available at www.htacoremodel.info/BrowseModel.aspx.
